PROGRAM RESOURCES USED

Visual Studio Code

I wrote, edited, and refined the website's HTML, CSS, and JavaScript in Visual Studio Code.

GitHub

I used GitHub to store my website files, organize code updates, and manage revisions.

Adobe Illustrator

I used Illustrator to design and refine original graphics for the website.

Google Docs

I planned the website, organized page content, and documented project ideas in Google Docs.

Google AI certification courses

I used Google AI coursework to learn about the capabilities, limits, and responsible use of AI. The courses supported my understanding; they did not generate my website or research.

Claude (Anthropic)

I used Claude as a generative coding assistant to review, troubleshoot, and suggest refinements to code I originally wrote.
